

Who: Miss Parker's 1st grade class

When: April 1st-April 22nd

What: During the month of April, we are going to do a recycling project. The goal is to teach each student how they can help save our Earth by recycling. Today we made paper recycling bags. It is your child's job to place things that can be recycled in their recycling bag. When it is full you may dump items in the recycling bins behind VSE. Some families may need to dump their recycling more than once. I have attached a sheet where your family can record when you dumped the recycling and how much it weighed (I am trying to tie Math into this project too) In class, we will be making inferences on how much we can recycle and we will chart our results. Thanks for helping make this project meaningful for the kids. I know it is extra work and I appreciate you all immensely!!!! On Earth Day (April 22nd) we will total up how much our class was able to recycle. If you have any questions please email me!!!
